

Edison Intern — Program Manager + HR Final Prep

Karanbhai Bheda · SVNIT Surat · EID Software 2027 · detailed answers from public GEHC reviews

16 PM questions

14 HR questions

Follow-ups + scripts

No-show = withdrawal

Read first. Same public review bank as campus Edison/EEDP paths: GFG Internship+PPO EEDP Manager, FTE EEDP managerial (13→8→HR→6), Intern 2021, Off-campus 2021 manager, SVNIT Aug 2024 tech-clear→HR-reject, Freshers Dunia SW Intern 2026 (Tech→Managerial→HR), AmbitionBox managerial themes. **HR is a real filter** — a SVNIT candidate cleared tech and failed HR on products / competitors / relocate.

How to use: Read each answer out loud twice. Keep 60–90 seconds. Own only your LogiFlow slice: **Route Composer · SSE · decision-intelligence**. Cloud Run/Vercel are on your resume — say deploy-path awareness, not knobs you didn't set. Never invent Kavya's 73/68/78.3 metrics.

Your path

- Tech / panel — then Program Manager
- HR — products, competitors, relocate, strength with proof
- Target: EID Software → growth toward EEDP

Kill-shots

- No-show / late join = withdrawal
- Vague “why healthcare”
- Hesitation on Bengaluru
- Claiming whole LogiFlow / fake metrics
- Memorised internet HR script

PART A — Program Manager Round (detailed)

Sources: GFG Internship+PPO EEDP Manager · GFG FTE EEDP managerial · GFG EEDP managerial · Off-campus 2021 Sr Manager · Freshers Dunia 2026 · AmbitionBox

1 Walk me through who you are — background, what you're studying, and what you're bringing to this internship.

GFG / campus opener · Confirmed

Why they ask: Sets tone; structure, confidence, relevance in ~60s.

Follow-ups:

- Proudest project?
- Why GE HealthCare / EID?
- What do you want from the internship?

SAY THIS (~60–90S)

I'm Karanbhai Bheda — Karan — second-year B.Tech Artificial Intelligence at SVNIT Surat, CGPA 8.75. I build full-stack software end to end: C/C++ and Python for fundamentals, FastAPI and Next.js for shipping. My main project is LogiFlow — a multimodal logistics decision platform for Google Solution Challenge 2026. I owned Route Composer, SSE streaming for live progress, and decision-intelligence scoring. I also did a short AI internship at Personify with TensorFlow models, and I'm a core member of the BIS Student Chapter on campus. What I bring is shipping habits — scope a feature, integrate it, debug it, document it — and I want to apply that under healthcare reliability standards at GE HealthCare EID.

DON'T SAY

Don't dump the whole resume — pick ownership and stop.

2 Tell me in detail about your strongest project — and what its USP would be for an organisation like ours.

GFG Internship+PPO — EEDP Manager · Repeated

Why they ask: Connects work to organisational value, not only tech.

Follow-ups:

- What did you personally build?
- Hardest design decision?
- How would this translate to healthcare?

SAY THIS (~60–90S)

LogiFlow compares road, rail, air, water and hybrid cargo routes with priority-weighted scoring and Pareto-style ranking — cheapest, fastest, safest — plus plain-language AI explanations. USP: decision support under competing objectives, not a single 'fastest only' answer. I owned Route Composer — chaining multimodal legs and normalizing multi-pipeline outputs into one schema — SSE so users see live progress, and the decision-intelligence flows that turn priorities into ranked picks. For an organisation, the value is explainable trade-offs under uncertainty. That same pattern — compose options, stream status, rank by what matters — maps to operational and clinical-software decisions where reliability and clarity matter.

DON'T SAY

Don't claim the whole product or invent accuracy metrics that aren't on your resume.

3 Be honest — you could earn more at Amazon or a pure product company. Why healthcare?

GFG Internship+PPO · Intern 2021 · Confirmed

Why they ask: Screens genuine motivation and retention.

Follow-ups:

- So money doesn't matter?
- What if a higher offer comes?
- What specifically about healthcare tech?

SAY THIS (~60–90S)

Money matters, but early in my career the multiplier is the standard I learn under. In a pure consumer product company I'd optimise engagement or checkout. In healthcare, software has to behave the same way every time — testing and reliability aren't optional. That matches how I already work on LogiFlow: contracts, edge cases, terminal SSE events when something fails. I want my first industry bar to be reliability, not only features. EID with a path toward EEDP is the growth track I want if I earn it — impact plus craft.

DON'T SAY

Don't trash product companies.

4 What do you actually know about GE HealthCare? Website or elsewhere?

GFG FTE EEDP Manager — 'go through their website' · Confirmed

Why they ask: Filters candidates who didn't research.

Follow-ups:

- Name a product line.
- Who are customers?
- Where does software fit?

SAY THIS (~60–90S)

GE HealthCare is a major medical technology company, now standalone. Business spans imaging — MRI, CT, X-ray, ultrasound — patient monitoring, and a growing software and digital layer that turns device data into clinical insight. Customers are hospitals, imaging centres and clinicians. What stands out to me is software quality on top of devices — reproducible behaviour, clear status, careful integration. That's where full-stack engineers who care about contracts and failure modes fit, which is how I try to ship.

DON'T SAY

Don't invent product model numbers.

5 Do you know what Edison / EID / EEDP are? Explain your understanding.

GFG Internship+PPO EEDP Manager · Repeated

Why they ask: Confirms you understand the program.

Follow-ups:

- Why is that a fit?
- What would you want exposure to?

SAY THIS (~60–90S)

EID — Edison Internship Development — is the internship track into GE HealthCare engineering, and I'm targeting Software for 2027. Edison more broadly is the engineering and digital / AI ecosystem products build on. EEDP is the structured early-career program that rotates engineers across teams for breadth before specialising. What appeals to me is learn-by-shipping on real systems under healthcare standards, with a clear growth path if I perform. If I've got a detail slightly off, I'd like to hear how you'd describe it — I want to get into it properly.

DON'T SAY

Don't bluff exact rotation structure.

6 Why are you a good fit, and are your technologies relevant?

GFG EEDP Managerial · FTE Manager · Repeated

Why they ask: Credible stack-to-need map.

Follow-ups:

- Strongest skill?
- What would you need to learn?

SAY THIS (~60–90S)

My core is full-stack shipping with strong OOP and DSA foundations — C/C++, Python, TypeScript, FastAPI, Next.js, Redis, REST and SSE. On LogiFlow I designed Composer and streaming flows end to end and integrated them into a live decision UI. Personify gave me a short cycle of train–evaluate–debug on TensorFlow models. That's relevant because healthcare software needs reliable APIs, clear status under failure, and engineers who can own a module from requirements through deploy. Cloud Run and Vercel are on my resume as deploy paths I worked with — I'll speak to smoke checks and logs, not knobs I didn't set. I'll have plenty to learn about clinical domain and your stack, and I'm comfortable learning fast.

DON'T SAY

Don't dump every buzzword — connect tools to outcomes.

7 Tell me about a time you disagreed with a teammate. How did you handle it?

Behavioural / AmbitionBox managerial · Repeated

Why they ask: Maturity — conflict without ego.

Follow-ups:

- What if they still disagreed?
- What did you learn?

SAY THIS (~60–90S)

On LogiFlow we disagreed on how much to show in the live SSE stream — one view was 'stream every partial status,' another was 'only milestones so the UI stays clean.' I wanted richer events for debugging, but that risked a noisy progress bar. We didn't argue opinions — we sketched the contract: always emit a terminal complete or error event, and keep intermediate events sparse but meaningful. That kept the UI calm and made hung streams impossible to miss. Lesson: make disagreements about the contract and the user experience, not about who is right.

DON'T SAY

Don't pick a fight you 'won' by overriding someone.

8 Describe something unfamiliar. How do you learn under time pressure?

Extern / behavioural pattern · Adapted

Why they ask: Repeatable learning method for interns.

Follow-ups:

- Concrete example?
- How do you know you know enough?

SAY THIS (~60–90S)

SSE streaming at production-ish quality was new for me when we started LogiFlow. Method: smallest end-to-end path first — one event type from server to UI — then add reconnect and failure cases one at a time. I reproduce broken states with logs, fix the contract, retest. I know enough when I can explain why a change helped — for example always sending a terminal error when an upstream leg times out — not only that the demo stopped hanging. Same loop for a new codebase or healthcare domain: baseline, measure, improve.

DON'T SAY

Don't say 'I just Google it' with no structure.

9 Tell me about a time something you owned broke. What did you do?

Manager project-depth pattern · Off-campus 2021

Why they ask: Accountability — hide vs fix.

Follow-ups:

- Did you tell the team?
- What changed so it wouldn't recur?

SAY THIS (~60–90S)

One real failure mode: the SSE client showed a hung progress bar because an upstream compose leg timed out without emitting an error event — stream stayed open, UI looked frozen. It was in my streaming path, so I owned it out loud, reproduced it, fixed by always sending a terminal error or complete event, and tightened per-leg timeouts. Retested disconnect and timeout cases. Owning a break fast beats a quiet patch — especially when users need clear status.

DON'T SAY

Don't blame teammates or invent a heroic story.

10 How do you take critical feedback about your work?

GFG honesty tip · Repeated

Why they ask: Coachability.

Follow-ups:

- Example that stung?
- Ever disagreed with feedback?

SAY THIS (~60–90S)

I want feedback — I improve faster with it. Rule: don't get defensive, clarify the point, act, close the loop. On LogiFlow a teammate said my early Composer responses were hard to consume because pipeline outputs weren't normalized enough. That stung a little because I'd been focused on 'it works.' They were right — I tightened the schema and integration got easier. If I disagree, I'll bring evidence respectfully, but I default to assuming they've seen a failure mode I haven't.

DON'T SAY

Don't claim you never get negative feedback.

11 Biggest challenge you've faced, and what did you learn?

Hackathon / X-factor probes · Repeated

Why they ask: Real reflection, not humblebrag.

Follow-ups:

- Would you do differently?
- How did it change how you work?

SAY THIS (~60-90S)

Biggest challenge was scoping LogiFlow under Google Solution Challenge pressure while owning Composer, SSE and decision-intelligence together. Early on I wanted every mode and every edge case in the first cut — we were drowning. Turning point: cut to a shippable compose → stream → rank path, then harden failure events. Lesson: prioritisation is a skill — small shippable slices beat a perfect unfinished system. Same habit I'd bring as an intern.

DON'T SAY

Don't invent a fake challenge.

12 Where do you see yourself in 2-3 years?

Career-path · Repeated

Why they ask: Ambition, realism, retention.

Follow-ups:

- Does that involve GEHC?
- Higher studies?

SAY THIS (~60-90S)

In two to three years I want to be a reliable full-stack / systems-minded engineer who can own a service end to end — APIs, failure modes, clear status — in a healthcare context. Concretely: deepen backend and quality habits, build enough domain knowledge to make good product decisions, not only technical ones. EID into a path toward EEDP is designed for that breadth-then-depth. I'm not looking to hop around; I want to compound where reliability is the bar.

DON'T SAY

Don't say you'll be a manager in 2 years or hint you'll leave.

13 Any plans for higher studies — master's?

GFG Internship+PPO EEDP Manager · Confirmed

Why they ask: Retention / flight-risk screen.

Follow-ups:

- Leave in a year?
- Part-time later?

SAY THIS (~60-90S)

I've thought about it honestly. Near term, industry will teach me more than another degree — I learn fastest by owning real modules. An EID internship and then full-time growth in healthcare tech is the plan. If years later a master's would deepen a specific area of impact, I'd consider it — only if it made the work better, not as a default. This internship isn't a placeholder before grad school.

DON'T SAY

Don't signal you'll leave next year for a master's.

14 What have you learned that will make you effective here?

Learning probes · GFG · Repeated

Why they ask: Transferable strengths with proof.

Follow-ups:

- Which matters most?

SAY THIS (~60–90S)

Three things. First, contracts and failure modes — SSE taught me users need a terminal complete or error, not a silent hang. Second, ship in slices — Composer → stream → rank before polishing everything. Third, own breaks out loud — trust beats looking flawless. Those habits make an intern useful: give me an ambiguous module and I'll get a measurable first version working, with clear status when something fails.

DON'T SAY

Don't list soft skills with no proof.

15 Role is based in Bengaluru. Willing to relocate?

GFG SVNIT Aug 2024 HR reject case · Confirmed

Why they ask: Practical filter — hesitation = risk.

Follow-ups:

- Constraints?
- How soon?

SAY THIS (~60–90S)

Yes — fully willing and comfortable relocating to Bengaluru. I've thought it through. It's where the work I want is happening, and on-site early helps me learn faster with the team. No constraints that would get in the way; I can move on your timeline. Relocation isn't a hesitation.

DON'T SAY

Don't hedge with 'maybe' or 'check with family' without a clear yes.

16 Do you have any questions for me?

End of every manager round · Confirmed

Why they ask: Genuine interest.

Follow-ups:

- They'll watch whether you engage.

SAY THIS (~60–90S)

Yes. For an EID Software intern, what does success look like in the first month — what would make you say this person is doing well? Second: how does the team balance shipping speed with the validation healthcare software needs day to day? If there's time: what do you personally find most rewarding about working here? I want to hit the ground running and understand the environment, not only the tasks.

DON'T SAY

Don't say 'no questions.'

PART B — HR Round (detailed)

Sources: GFG SVNIT Aug 2024 (tech clear → HR reject) · Intern 2021 HR · FTE EEDP HR · Senior campus intel · Off-campus 2021 HR

HR kill-shots: vague products · guessed competitors · “maybe” on relocate · strength with no example · inventing offers · memorised script · no-show.

1 Tell me about yourself — the person, not only the resume.

GFG Intern 2021 · FTE HR · Confirmed

Why they ask: HR reads communication; tech clear ≠ offer.

Follow-ups:

- What drives you?
- How would friends describe you?

SAY THIS (~60–90S)

I'm Karan, second-year AI at SVNIT Surat, CGPA 8.75. I like building software that actually works under messy conditions — that's LogiFlow: I owned Route Composer, SSE live progress, and decision-intelligence ranking for Google Solution Challenge 2026. Outside that I did a TensorFlow internship at Personify, shipped EasyBook as a MERN project, and reached Web Wonder finals with Beneath The Blue. I'm also a core member of the BIS Student Chapter. Friends would say I'm the one who stays calm when something breaks and owns the fix. I want to grow in healthcare technology software at GE HealthCare EID.

DON'T SAY

Don't repeat a pure tech monologue — keep it human.

2 Why GE HealthCare specifically, and why healthcare?

GFG Intern 2021 · FTE EEDP HR · Confirmed

Why they ask: Classic HR filter.

Follow-ups:

- Couldn't you say that about any company?
- What if early tasks aren't 'AI'?

SAY THIS (~60–90S)

Healthcare is where reliable software matters most — careless behaviour isn't a lost sale, it can affect care. That motivates careful contracts, clear status, and honest debugging — how I already work. GE HealthCare specifically sits at hardware, software and AI in medical technology — imaging, monitoring, digital layer. Full-stack engineers who care about failure modes aren't a side function; they're central. EID Software with a path toward EEDP is the growth track I want. So it's not any big company — meaningful bar plus a stack I can grow into.

DON'T SAY

Don't give a brochure answer.

3 Who are GE HealthCare's main competitors?

GFG SVNIT Aug 2024 HR · Confirmed

Why they ask: Industry landscape check.

Follow-ups:

- What makes GEHC different?
- Where is the industry heading?

SAY THIS (~60-90S)

In medical imaging and healthcare technology, Siemens Healthineers and Philips are the names most often mentioned alongside GE HealthCare. Competition is increasingly about the software and AI layer as much as devices — who turns data into better clinical decisions reliably. That's part of why the role appeals to me.

DON'T SAY

Don't guess random company names.

4 Name some GE HealthCare products or areas.

GFG SVNIT Aug 2024 HR · Confirmed

Why they ask: Diligence check.

Follow-ups:

- Which area interests you?

SAY THIS (~60-90S)

Imaging — MRI, CT, X-ray, ultrasound — patient monitoring, and a growing software/digital layer including the Edison ecosystem that turns device data into clinical insight. The software reliability and integration side interests me most — APIs, status under failure, systems clinicians and operators can trust. That's where my full-stack and debugging habits transfer.

DON'T SAY

Don't invent model numbers.

5 Biggest strength? Give a concrete example.

GFG FTE EEDP HR · Confirmed

Why they ask: Evidenced strength.

Follow-ups:

- How did that help the team?

SAY THIS (~60-90S)

Ownership through debugging. Example: SSE hung progress when a compose leg timed out without an error event. I owned it, reproduced it, always emit terminal complete/error, tightened timeouts, retested. Same ownership shows up in Composer schema work and Personify iteration on model quality. For a team that means you can hand me a module and trust I'll drive it and tell you honestly when it breaks.

DON'T SAY

Don't say 'hardworking' with no story.

6 Biggest weakness? How are you working on it?

Standard HR · Repeated

Why they ask: Honesty + fix.

Follow-ups:

- Real problem it caused?
- What's changed?

SAY THIS (~60-90S)

I used to over-scope — want every edge case before shipping the core path. On LogiFlow that nearly cost us a clean demo timeline. Fix: force a thin vertical slice first — compose → stream → rank — then harden. I still catch myself wanting to gold-plate, but I time-box and show a working path earlier. Shipping smaller got better feedback faster.

DON'T SAY

Don't say 'I work too hard.'

7 Proof you work well in a team.

FTE HR · Senior campus · Repeated

Why they ask: Collaboration.

Follow-ups:

- Usual role?
- Teammate not pulling weight?

SAY THIS (~60-90S)

LogiFlow is team software — my slice was Composer, SSE and decision-intelligence, but it only worked because schemas and UI integration were shared. When we disagreed on stream verbosity, we settled on a contract together. Web Wonder finals with Beneath The Blue was the same story under deadline. BIS chapter work is campus delivery with others. If someone is stuck, I ask what's blocking first — usually a blocker, not attitude.

DON'T SAY

Don't say you prefer working alone.

8 Willing to relocate to Bengaluru?

GFG SVNIT Aug 2024 HR · Confirmed

Why they ask: Hard filter.

Follow-ups:

- Any constraints?

SAY THIS (~60-90S)

Yes — completely willing and happy to relocate to Bengaluru. Thought it through, not just saying yes to pass. On-site early helps me learn faster. No constraints; I can move on your timeline.

DON'T SAY

Don't hedge.

9 Other offers? CTC / stipend expectations?

GFG FTE EEDP HR · AmbitionBox · Confirmed

Why they ask: Money talk + honesty.

Follow-ups:

- If our number is lower?
- First choice?

SAY THIS (~60-90S)

For an internship my priority is learning under a high reliability bar, not squeezing the highest stipend. I trust GE HealthCare to offer what's fair and standard for EID. This is a top choice because of healthcare and the Edison path — not a fallback. I won't invent competing offers. If you want a specific number conversation I'm open, but fit and work come first for me now.

DON'T SAY

Never invent offers.

10 Hobbies, clubs, outside academics?

GFG FTE Manager hobby · Senior SVNIT · Repeated

Why they ask: Cultural fit.

Follow-ups:

- How do you unwind?

SAY THIS (~60-90S)

I like building and finishing software — contests and live projects are hobbies as much as prep. Web Wonder finalist with Beneath The Blue. Core member of BIS Student Chapter at SVNIT — standards awareness and chapter delivery. When I reset, I either debug a small clean problem or step away briefly and come back with a list. I like pressure with a clear goal.

DON'T SAY

Don't say you only study.

11 Family background — briefly.

Campus HR common

Why they ask: Rapport / stability.

Follow-ups:

- Supportive of relocate?

SAY THIS (~60-90S)

I come from a supportive family that's encouraged education and independence. They're behind engineering at SVNIT and fully supportive of relocating to Bengaluru for the right role. They've pushed ownership and doing work properly — that shows up in how I ship. Short version: grounded support, no relocate blockers.

DON'T SAY

Don't over-share.

12 Situational: tight deadline, you spot a mistake no one noticed. What do you do?

Work ethics · Repeated

Why they ask: Integrity — critical in healthcare.

Follow-ups:

- Even if deadline slips?
- Teammate's mistake?

SAY THIS (~60–90S)

I flag it. In healthcare a hidden mistake compounds. Understand scope, tell who needs to know with a proposed fix and timeline. Same instinct as the hung SSE case — own it out loud. A slightly late correct ship beats a silent wrong one; usually early honesty saves the deadline because people can help. Teammate's issue: raise privately and constructively, fix-focused.

DON'T SAY

Don't hide it to protect the deadline.

13 How do you handle stress with several things due?

Behavioural · Repeated

Why they ask: Coping method.

Follow-ups:

- Recent example.

SAY THIS (~60–90S)

List it, prioritise ruthlessly, ship the critical path first. LogiFlow under Solution Challenge plus academics and chapter work was a lot — cutting to compose→stream→rank kept me moving. Short reset, then next concrete step. Structure over panic.

DON'T SAY

Don't say you never feel stress.

14 Any questions for me?

Every HR round · Confirmed

Why they ask: Engagement check.

Follow-ups:

- They observe engagement.

SAY THIS (~60–90S)

What does the culture look like day to day for someone early in their career — who thrives here? How are EID interns mentored — feedback, ownership of real modules? And if alright: what made you personally stay at GE HealthCare? I want to commit properly, so the environment matters.

DON'T SAY

Don't ask only salary/leave. Never 'no questions.'

PART C — 15-minute aloud drill

1. **Tell me about yourself** — PM version, 60s
2. **Tell me about yourself** — HR version, 60s
3. **Why healthcare when product companies pay more?**
4. **Why GEHC / what do you know?** — imaging + software/AI + Edison
5. **LogiFlow USP** — Composer · SSE · decision-intelligence
6. **Bug story** — hung SSE / missing terminal error event
7. **Disagreement** — stream verbosity → contract
8. **Strength + example** — ownership through debugging
9. **Weakness + fix** — over-scope → thin vertical slice
0. **Relocate Bengaluru?** — clean yes
1. **Higher studies?** — industry first
2. **Competitors?** — Siemens Healthineers, Philips
3. **Mistake under deadline** — flag + fix
4. **2–3 year plan** — EID → depth here
5. **Questions for me?** — from memory

After 15 minutes: redo only the two weakest answers.

PART D — Numbers & claim cheat sheet

Item	Exact line
Name	Karanbhai Bheda (Karan)
CGPA	8.75 / 10 · B.Tech AI · SVNIT Surat · 2024–28
Target	GE HealthCare EID Software 2027 → growth toward EEDP
LogiFlow ownership	Route Composer · SSE streaming · decision-intelligence (GSC 2026, Neural Foundry)
LogiFlow stack	Python, FastAPI, TypeScript, Next.js, SSE, Redis, GCP / Vercel (Cloud Run on resume — deploy awareness only)
Internship	Personify AI Intern Mar–Apr 2025 — TensorFlow classify/detect, preprocess→evaluate
Other projects	EasyBook (MERN) · Beneath The Blue (Web Wonder Finalist)
Leadership	Core Member, BIS Student Chapter, SVNIT
Languages	C/C++, Python, JavaScript, TypeScript
Relocation	Bengaluru — yes
Never invent	Kavya's 73.0/68.0/78.3 metrics · Cloud Run concurrency knobs you didn't set

Remember if you forget everything else: Composer + SSE + decision-intelligence · why healthcare (reliability bar) · products/competitors/relocate · strength with bug story · Bengaluru yes · own your slice only.
