

Interviewer Brief — Venu S

For Karanbhai Bheda · EID Software · resume-aligned

Test panel

Quality focus

Public-web only. No Glassdoor/AmbitionBox/GFG review names him. Use this to choose what *you* lead with — never to show off research.

Who he is (one screen)

Staff Test Engineer, GE HealthCare Bengaluru since Jul 2023. Before that: Siemens / Siemens Healthineers test automation (~2018–2023), Capgemini, TCS. Self-describes as automation expert across **banking/finance and healthcare**, deep **Core Java**, Selenium / Itko Lisa / Squish, JUnit / Cucumber / TestNG, and building **data-driven frameworks from scratch**.

Career timeline → what it means for you

Period	Role	Implication for Karan
2023 → now	Staff Test Eng, GEHC	Knows GEHC quality bar; healthcare software must be verifiable
2021–23	Sr Test Eng, Siemens	Product-company testing discipline
2018–21	Sr Test Eng, Siemens Healthineers	Medical-tech domain years — reliability language scores
2017–18	Capgemini automation	Services-era automation delivery
Earlier	TCS automation	Long automation career, not a fresh SDE interviewer

How to pitch (resume-aligned)

- LogiFlow ownership** — Route Composer, SSE streaming, decision-intelligence (priority-weighted + Pareto). Full-stack FastAPI + Next.js.
- Lifecycle habits** — scoping, API contracts, Cloud Run / Vercel deploy paths, docs (on your resume — defend them).
- Testing story** — how you validated compose legs, stream disconnects, ranking edge cases. One real bug.
- Personifyw intern** — train/eval/debug TensorFlow models; systematic iteration.
- EasyBook / Beneath The Blue** — only if asked; show end-to-end shipping.

YOU SAY

Good morning sir, I am Karanbhai Bheda, second-year B.Tech Artificial Intelligence at SVNIT Surat, CGPA 8.75. On LogiFlow — Google Solution Challenge 2026 — I owned the Route Composer, SSE streaming, and decision-intelligence flows on FastAPI and Next.js, including live progress updates for multimodal itineraries. I also interned at Personifyw building and debugging TensorFlow models. I want the GE HealthCare EID Software internship because I want to write code that is tested hard enough for clinical settings, and grow toward EEDP.

Bridge to his world without naming him: “In logistics a wrong ranking wastes money. In healthcare a wrong path can waste trust — so I care about contracts, edge cases, and being able to reproduce a failure.”
