+ BANKING/FINANCE PAST

1. Confirmed facts

Item	Detail
Name / handle	Venu S · linkedin.com/in/venu-s-89992748
Current role	Staff Test Engineer , GE HealthCare, Bengaluru (Jul 2023 → present)
Headline	Test Staff Engineer at GE HealthCare; automation expert (banking/finance + healthcare)
Prior	Sr Software Test Engineer, Siemens (Aug 2021 – Jun 2023)
Prior	Sr Software Test Engineer, Siemens Healthineers (Jun 2018 – Jul 2021)
Earlier	Automation Test Engineer, Capgemini (Jun 2017 – May 2018); Automation Engineer, TCS
Tooling he names	Selenium, Itko Lisa (service/API automation), Squish ; Core Java; JUnit, Cucumber, TestNG; data-driven frameworks built from scratch
Public reviews of him as interviewer	None found

Mental model (different from an architect panel). You are talking to a senior *quality / automation* engineer who has spent a decade making sure software fails safely before it ships — including years in medical-tech (Siemens Healthineers → GEHC). He will care less about fancy architecture diagrams and more about: *How do you know it works? What did you test? What broke? How did you debug?*

2. What this means for a real Round I

Likely shape INFERENCE: intro → LogiFlow ownership → “how did you test / debug” → edge cases on Composer/SSE → light OOP or coding → why GEHC → your question.

Lead with

- What **you** owned: Route Composer, SSE, decision-intelligence
- One concrete bug + how you found it
- API contracts / integration checks
- Honest “I have not used Selenium; closest is ____”

Avoid

- Claiming Selenium/Cucumber you never used
- “We didn’t need tests — it worked in demo”
- Architecture theatre without failure modes
- Mentioning his LinkedIn tooling

YOU SAY

If automation comes up: “I have not written Selenium or TestNG suites. On LogiFlow I validated with API contract checks, manual edge cases on compose/SSE, and debugging live stream failures. I am ready to learn Java-based automation on the job — my closest base is Python + API testing habits.”

Ask him (pick 1): “On a healthcare product team, what does a strong intern look like in the first two weeks — writing feature code, or pairing on test design?” · or · “When you automate around medical software, what do you protect first — functional paths or safety/regression suites?”
