

PM Mock 1 — EID Intern · Surekha / Edison PM

Kavya Bhatiya · campus EID Intern · post-tech · no PPO / “project you’re on at GE” questions

20–25 min

EID Intern

Ownership · fit · Bengaluru

Do not name-drop

Removed as irrelevant for EID Intern: “What project are you on, and what USP does it create for an organisation?” That is PPO/EEDP Manager language for current interns. Here we ask about *your* college / GSC project.

How to use. Friend reads pink only. 25-min timer. Green = debrief. She screens: will this intern show up, own a slice, take feedback, care about healthcare — not GE product USP.

Your project

LogiFlow · what you owned

Why EID

healthcare bar + mentorship

Logistics

Bengaluru full yes

Clock

Time	Block	Goal
0:00–2:00	Intro	45–60s; why EID Intern; stop.
2:00–8:00	Your project	LogiFlow ownership + hard part + metrics.
8:00–13:00	Why GEHC / healthcare	Motivation; no Amazon-bash.
13:00–17:00	Learning / ambiguity	Metric honesty or thin-slice STAR.
17:00–20:00	After internship	Ship + learn; EEDP only if earned — light.
20:00–25:00	Bengaluru + questions	Full yes; intern success criteria.

Script

INTERVIEWER Good morning. Please introduce yourself — and why the EID / Edison Intern role.

YOU SAY

Good morning. I am Kavya Bhatiya, B.Tech Artificial Intelligence at SVNIT Surat, CGPA 9.05. I cleared technical. Strongest work: LogiFlow — multimodal logistics on FastAPI, PostgreSQL, Next.js with delay-risk ML — Top 106 Google Solution Challenge 2026. I am here for EID Intern because I want to contribute on a live healthcare software team, take feedback from seniors, and learn GEHC engineering practices on-site in Bengaluru.

INTERVIEWER Tell me about your strongest project — what did you personally own, and what was hard?

EID Intern framing · NOT “USP for the organisation” / PPO

YOU SAY (~75s)

LogiFlow ranks road/rail/air/sea on time, reliability, cost, and sustainability. Most tools optimise only speed or cost; we put delay risk in the ranking. I owned the FastAPI ranking pipelines and the HistGradientBoosting delay-risk model — 73.0% accuracy, 68.0% delayed recall, 78.3% ROC-AUC — tuned for recall because missing a delay costs more than a false alarm. Hard part: early accuracy looked fine while we were missing real delays. I moved the team to recall and ROC-AUC and treated the model as an advisory risk signal, not a verdict. Outcome: Top 106 global. That habit — measure what the user feels — is what I want to bring as an EID intern.

INTERVIEWER Why healthcare — and why GE HealthCare — for this internship?

YOU SAY (~60s)

I want my first real engineering bar to be reliability under clinical-adjacent standards. In LogiFlow a wrong risk signal costs money; here it can cost trust. GE HealthCare builds imaging and monitoring plus a software/AI layer (Edison) clinicians rely on. EID gives live project work under review — how I learn fastest. Money matters, but early on the problem shape matters more; I’m not Amazon-bashing, I’m choosing this bar.

INTERVIEWER Tell me about a time something was unfamiliar or you had to change approach under pressure.

YOU SAY – STAR

Delay model looked fine on accuracy, weak on real delays. Unfamiliar: defending a “bad looking” metric choice. Switched focus to recall/ROC-AUC; kept the model advisory inside ranking. Learned to pick the metric the user feels — same loop I’ll use on a new codebase here.

INTERVIEWER Where do you see yourself after this internship?

YOU SAY (~40s)

Short term: contribute a tested slice on a real backlog and learn GEHC practices. If performance is strong, I’m interested in growing further here — including an EEDP-style path later if I earn it. I’m not claiming a title; I want to compound in healthcare software.

INTERVIEWER Bengaluru, full duration — any constraints?

YOU SAY

Yes — full duration, on-site Bengaluru, no constraints. Every scheduled slot is mandatory; no-shows are not an option for me.

INTERVIEWER Questions for me?

YOU SAY (pick 1–2)

What does a strong EID intern look like in week 2 versus week 6?
How are interns staffed — one-team ownership or rotating support?
Avoid: stipend, PPO odds, WFH, “how did I do?”, LinkedIn name-drops.

Rapid probes

- Explain LogiFlow to a non-coder → risk score for routes, not a black-box “fastest.”
- Strength with proof → ownership + metric honesty.
- Weakness → early over-scoping; now ship thin slices.
- Higher studies? (if asked) → industry first this internship; master’s later only if a problem needs research depth.

Score 1–5: Structure · Project ownership · Why EID/GEHC · Learning STAR · Bengaluru · Questions.

Fail: answering as if already on a GE project · inventing SKUs · “maybe” relocate · no questions.
