

Mock 9 — Expectations + medical-field interest

GFG GEHC On-Campus IIT BHU HR pattern · “put your views forward clearly”

20 min

Expect from intern?

Health problems ideas

INTERVIEWER Tell me about yourself. Hobbies?

YOU SAY

Kavya, AI at SVNIT, CGPA 9.05. LogiFlow Top 106. Hobbies: DSA practice, campus competitions, reading healthcare-tech explainers — short.

INTERVIEWER What are you expecting from this internship?

IIT BHU HR — CONFIRMED theme

YOU SAY

A real ticket on a backlog, weekly feedback, and the chance to ship a tested slice. I expect to be useful by week 3–4, not only “learning by watching.” Mentorship + ownership.

INTERVIEWER Are you interested in the medical field — or only coding?

YOU SAY

I’m an engineer first — but I’m drawn to medical tech because the users are clinicians and patients. I don’t claim clinical training; I claim respect for reliability and clear communication of uncertainty (same as our delay-risk as advisory, not verdict).

INTERVIEWER What more instruments or machines / software could help health problems?

IIT BHU — wanted to see genuine interest, not memorised product list

YOU SAY

Stay humble and concrete: better workflow software that reduces missed follow-ups; decision-support that surfaces risk without replacing the clinician; monitoring alerts that cut false alarms so nurses don’t ignore them. I care about false negatives and alert fatigue — that’s an engineering problem I already felt on delay recall vs accuracy.

INTERVIEWER Prefer building devices or software?

YOU SAY

Software — backends, data pipelines, ML in systems. Devices matter; my skill path is the software layer that makes device data trustworthy.

INTERVIEWER Bengaluru? Questions?

YOU SAY

Yes. Q: How do interns get exposure to the clinical/context side without being clinicians?
