

Program Manager Round — Prep

Kavya Bhatiya · post-tech · Edison Intern · GE HealthCare

Ownership STAR Fit Bengaluru yes

Where you are. Technical round cleared. Next: **Program Manager**, then **HR** (likely Saturday this week). No-show = withdrawal — plan the day; join early; stable network. This round is about *delivery, ownership, communication, and fit* — not coding puzzles.

Manager mindset. Can this intern take a messy task, ask the right questions, ship a small slice, take feedback, and not disappear? Lead with LogiFlow ownership + Solution Challenge Top 106 + honest teamwork.

1. 45-second open (then stop)

YOU SAY

Good morning sir/ma'am. I am Kavya Bhatiya, B.Tech Artificial Intelligence at SVNIT Surat, CGPA 9.05. I cleared the technical round. My strongest work is LogiFlow — multimodal logistics on FastAPI, PostgreSQL and Next.js — Top 106 globally in Google Solution Challenge 2026. I also do multi-objective research with NSGA-II, and I ship with a testing mindset. I am here for the Edison Intern role because I want to contribute on a live healthcare software team and grow toward EEDP.

2. What a Program Manager usually probes

Theme	What they want to hear
Ownership	What you personally drove end-to-end (not “we”)
Prioritisation	What you cut under deadline and why
Collaboration	How you split work, handled disagreement, took review
Communication	Can you explain risk/trade-offs to a non-coder
Learning agility	New stack / feedback — how fast you adapt
Logistics	Bengaluru, 8-week availability, no-show risk = zero

3. Spoken answers (60–90 sec)

Q. Walk me through a project you owned — what was hard?

YOU SAY

LogiFlow. Problem: planners choose among road, rail, air and sea with conflicting goals — time, reliability, cost, sustainability. I owned FastAPI backend pipelines, HistGradientBoosting delay-risk (73% accuracy, 68% delayed recall, 78.3% ROC-AUC), and Docker packaging with the team. Hard part: early accuracy looked fine while missing real delays — class imbalance. We moved the conversation to recall and ROC-AUC and treated the model as a risk signal inside ranking, not a verdict. Outcome: Top 106 global; I learned to measure what the user actually needs.

Q. Tell me about a disagreement or conflicting priority on the team.

YOU SAY

STAR — Situation: Solution Challenge timeline; debate whether to polish UI or harden delay-risk metrics. Task: I argued metrics honesty mattered for judges and for trust. Action: We time-boxed UI polish, kept Gemini off the critical ranking path, and locked the three metrics we could defend. Result: Cleaner story in demos; fewer last-minute surprises. I compromise on polish, not on numbers I cannot explain.

Q. How do you handle ambiguous requirements?

YOU SAY

Write the smallest acceptance check: input, output, failure case. Confirm with the owner in one message. Build a thin slice, show it early, then iterate. On LogiFlow that meant fixing the rank schema before adding more modes.

Q. Why Edison / why GE HealthCare for an internship?

YOU SAY

Edison is GE HealthCare's AI and analytics layer over imaging and device data — models that must be reliable enough for clinical workflows. In LogiFlow a wrong risk signal costs money; here it can cost trust. I want that bar. EID/Edison gives live project work and a path toward EEDP. I learn fastest by shipping under review, not only coursework.

Q. Where do you see yourself after the internship?

YOU SAY

Short term: contribute a tested slice on a real backlog and learn GEHC engineering practices. Medium term: if performance is strong, I am interested in EEDP — deeper product ownership in healthcare software. I am not claiming a title; I am saying I want a multi-year engineering path here if I earn it.

Q. Are you available for the full internship? Bengaluru?

YOU SAY

Yes — full duration, on-site Bengaluru, no constraints. I will treat every scheduled slot as mandatory; no-shows are not an option for me.

4. Questions you ask (pick 1–2)

- “What does a strong Edison intern look like in week 2 versus week 6?”
- “How are interns staffed — one team ownership, or rotating support?”
- “What communication cadence do you expect — standups, written updates, demos?”

Avoid: stipend, PPO odds, WFH, “how did I do?”

Do not: re-litigate the tech round with jargon · invent GE product depth · badmouth teammates · sound “I just want any internship.” **Do:** ownership · one STAR · relocation yes · curiosity about their team.
